

# A Partially Expanded Proof of $\langle 4 \rangle 3$

$\langle 1 \rangle 1.$  ASSUME: *Inv*, *Producer*

PROVE:  $C!Send$

$\langle 2 \rangle 1.$   $Len(chBar) \neq N$

$\langle 2 \rangle 2.$   $\exists v \in Msg : chBar' = Append(chBar, v)$

$\langle 3 \rangle 1.$  Pick  $v \in Msg$  such that  $buf' = [buf \text{ EXCEPT } ![p \% N] = v]$

$\langle 3 \rangle 2.$   $chBar' = Append(chBar, v)$

$\langle 4 \rangle 1.$   $p \ominus c \in 0 \dots (N - 1)$

$\langle 4 \rangle 2.$   $p' \ominus c' = (p \ominus c) + 1$

$\langle 4 \rangle 3.$  Q.E.D.

$\langle 5 \rangle 1.$   $Append(chBar, v) =$

$$\begin{aligned} [i \in 1 \dots ((p \ominus c) + 1) \mapsto \text{IF } i \in 1 \dots (p \ominus c) \\ \text{THEN } buf[(c \oplus (i - 1)) \% N] \\ \text{ELSE } v] \end{aligned}$$

PROOF: By definition of *chBar* and *Append*, since *Inv* implies  $p \ominus c$  is in *Nat*.

$\langle 5 \rangle 2.$   $chBar' = [i \in 1 \dots ((p \ominus c) + 1) \mapsto buf'[(c \oplus (i - 1)) \% N]]$

PROOF: By definition of *chBar*,  $\langle 4 \rangle 2$ , and definition of *Producer*, which implies  $c' = c$ .

Remember that priming an expression means priming all the variables in it.

$\langle 5 \rangle 3.$  ASSUME: NEW  $i \in 1 \dots ((p \ominus c) + 1)$

PROVE:  $chBar'[i] = Append(chBar, v)[i]$

$\langle 6 \rangle 1.$  CASE:  $i \in 1 \dots (p \ominus c)$

$\langle 6 \rangle 2.$  CASE:  $i = (p \ominus c) + 1$

$\langle 6 \rangle 3.$  Q.E.D.

PROOF: By the  $\langle 5 \rangle 3$  assumption,  $\langle 6 \rangle 1$ ,  $\langle 6 \rangle 2$ , and *Inv*, which implies  $p \ominus c$  is in *Nat*, so  $1 \dots ((p \ominus c) + 1)$  equals  $(1 \dots (p \ominus c)) \cup \{(p \ominus c) + 1\}$ .

$\langle 5 \rangle 4.$  Q.E.D.

PROOF: By  $\langle 5 \rangle 1$ ,  $\langle 5 \rangle 2$ , and  $\langle 5 \rangle 3$ .

$\langle 3 \rangle 3.$  Q.E.D.

$\langle 2 \rangle 3.$  Q.E.D.

$\langle 1 \rangle 2.$  ASSUME: *Inv*, *Consumer*

PROVE:  $C!Rcv$

$\langle 1 \rangle 3.$  Q.E.D.
