Finding a Line by its Number

By default, the Toolbox's module editor should display line numbers. If it doesn't, select Preferences on the File menu, select General/Editors/Text Editors, and check *Show line numbers*.

To jump to line 79, type control+*l* (that's a lower-case *L*), enter 79 in the pop-up dialog, and either click on the *OK* button or hit the Enter key.
